Page 2 (View Complete Item Description) Anatomy and Physiology is a dynamic textbook for the two-semester human anatomy and physiology course for life science and allied health majors. The book is organized by body system and covers standard scope and sequence requirements. Its lucid text, strategically constructed art, career features, and links to external learning tools address the critical teaching and learning challenges in the course. The web-based version of Anatomy and Physiology also features links to surgical videos, histology, and interactive diagrams. Material Type: Textbook Authors: Brandon Poe, Dean H. Kruse, Eddie Johnson, James A. Wise, J. Gordon Betts, Jody E. Johnson, Kelly A. Young, Mark Womble, Oksana Korol, Peter DeSaix (View Complete Item Description) The Anatomy Quizbook is an interactive learning book that will help students and tutors - indeed anyone interested in anatomy - learn, test and improve their knowledge of the human body. Readers are presented with carefully selected questions and diagrams addressing core learning in clinically-relevant anatomy. This selective rather than exhaustive approach will especially suit time-poor scholars. Regular self-testing will also ensure a robust and strategic understanding of the subject matter. In this first Volume, you can develop your knowledge of fundamental anatomy, including clinically-relevant terminology and the significant parts and operation of the: - Thorax, focusing on the heart, lungs, and associated bones, muscles, nerves, blood and lymphatic vessels. - Abdomen, exploring the stomach, intestines, pancreas, liver, gallbladder, kidneys, spleen and their supporting structures (muscles, nerves, blood and lymphatic vessels). - Pelvis, examining the bones, ligaments, vessels and nerves of the pelvic region, the features of male and female pelvis, and the major digestive and excretory organs (colon, rectum, bladder and urethra). Whilst developed primarily for students who are studying, or intend to study, medicine, the Anatomy Quizbook will reward all readers who seek to explore and learn about the workings of the human body. Regular users will find much to learn and build on, hopefully leading to further enthusiasm for a valuable subject that underpins much of medicine. Material Type: Textbook Author: Kerry G. Baker (View Complete Item Description) Includes the study of the gross and microscopic structure of the systems of the human body with special emphasis on the relationship between structure and function. Integrates anatomy and physiology of cells, tissues, organs, the systems of the human body, and mechanisms responsible for homeostasis. Material Type: Full Course (View Complete Item Description) Includes sections on the Endocrine System, the Cardiovascular System, the Lymphatic and Immune System, the Respiratory System, the Digestive System, Nutrition, the Urinary System, the Reproductive System, and Development and Inheritance. Material Type: Full Course (View Complete Item Description) Syllabi and Lab Exercises for SCI 201: Anatomy and Physiology I. This course is designed to provide students with a basic understanding of the structure, function and disorders of the human body. Topics include an overview of the integumentary, skeletal, muscular, and nervous systems, as well as a discussion of tissues and special senses. A three-hour lab session is required each week. Course materials written by Maria Carles and Georgia Thoidis, content uploaded to OER Commons by Victoria Vidal. Material Type: Full Course Author: Victoria Vidal (View Complete Item Description) Students learn how to manipulate the behavior of water by using biochar—a soil amendment used to improve soil functions. As a fluid, water interacts with soil in a variety of ways. It may drain through a soil's non-solid states, or its "pores"; lay above the soil, or move across cell membranes via osmosis. In this experiment, students solve the specific problem of standing water by researching, designing, and engineering solutions that enable water to drain faster. This activity is designed for students to explore how biochar helps soils to act as "sponges" in order to retain more water. Material Type: Activity/Lab Author: Chetan Sawhney (View Complete Item Description) Anatomy and Physiology Lab I slide decks created by Steven Lee M.S. Pathology, FTCC. The PowerPoints include labeled body images to assist students in identifying body parts. Nicole Shaw is only responsible for assisting Steven with licensing his work under an open license and uploading content to the Commons. Material Type: Module Author: Nicole Shaw (View Complete Item Description) Crash Course AP Science: Today Hank explains the skeletal system and why astronauts Scott Kelly and Mikhail Kornienko are out in space studying it. He talks about the anatomy of the skeletal system, including the flat, short, and irregular bones, and their individual arrangements of compact and spongy bone. He'll also cover the microanatomy of bones, particularly the osteons and their inner lamella. And finally he will introduce the process of bone remodeling, which is carried out by crews of osteocytes, osteoblasts, and osteoclasts. Material Type: Lecture Author: Denise Krefting (View Complete Item Description) These materials are designed to supplement a year-long three-course sequence that uses OpenStax Anatomy and Physiology (. Material Type: Activity/Lab, Homework/Assignment Author: Laird Sheldahl (View Complete Item Description) This activity by Lauren Roberts guides students through the process of finding, vetting, summarizing, and citing a scientific article. Professor Roberts is from South Mountain Community College in Arizona's Maricopa Community College District. Material Type: Activity/Lab Author: OpenStax, Rice University (View Complete Item Description) These are interactive activities that are based on the OpenStax textbook on Anatomy and Physiology. The majority of definitions have been incorporated into dialogue cards. And the majority of diagrams have been made into interactive drag and drop with MCQ and other question types. Material Type: Activity/Lab, Homework/Assignment Authors: Elita Partosoedarso, Open Education Lab (View Complete Item Description) Biology is designed for multi-semester biology courses for science majors. It is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. To meet the needs of today's instructors and students, some content has been strategically condensed while maintaining the overall scope and coverage of traditional texts for this course. Instructors can customize the book, adapting it to the approach that works best in their classroom. Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand—and apply—key concepts. Material Type: Full Course
